

# Don't Carry (or pay for) Excess Water.

Fritz-Pak offers the contractor two valuable finishing products. Packaged in our unique water-soluble bags, you don't need to mix it up until you are ready to use it.

**CONTROL FINISH** is a unique concrete finishing aid to "bring up the cream" without adding water that weakens concrete surfaces. Mix it up, spray it on, work it in for a creamy, easy-to-finish surface.

- Improves surface durability
- Eases the application of dry-shake hardeners
- Reduces plastic shrinkage cracks, dusting, crazing & crusting

**STEP 1**

Open outer plastic bag & remove inner water-soluble product bag. No need to open inner bag.

**STEP 2**

Place entire inner product bag and contents into your sprayer with water. Shake or stir for 5 minutes.

**STEP 3**

You are now ready to spray and finish!

**Expo-Rock** is a surface retarder for producing exposed aggregate finishes. Mix only what you need, spray it on, wait and wash it off.

- Contains a temporary dye: Shows you where you've sprayed, but won't stain concrete
- Helps you apply product evenly
- Less expensive than liquid surface retarders

Contractors and Ready Mix Producers continue to find FRITZ-PAK Concrete Admixtures a recipe for success, complete with directions...

# EASY TO USE! OPEN MIX & POUR

**STEP 1**

Open outer plastic bag & remove inner water soluble product bag. No need to open inner bag.

**STEP 2**

Place entire inner product bag and contents into the mixer.

**STEP 3**

Mix well for 5 minutes. You are now ready to pour!

Check out our full line of jobsite added concrete admixtures
