

FRITZ-PAK

Take control of your concrete.

Our **Non-Chloride Accelerator** and **Mini Delayed Set** are invaluable to control concrete set time.

For flawless slabs, use **Fritz-Pak's Superplasticizers** added directly to the truck at the job site. Never weaken your concrete with water to get the slump you need.

CONTROL

THE FLOW

Use **Control Finish** to complete the job. It "brings up the butter" to allow finishing without re-tempering with water, for a smooth durable surface. Excellent preparation for stamping and stenciling.

For countertops or precast, use **Counter-Flo** to get exactly the flow you need without more water, and without using someone else's expensive one-size fits-all mix. Our mini bags of white retarder and accelerator are perfect for small decorative batches.
